

DESIGN ASSIGNMENT

Rebuild the Trao Landing Page

For product designers who work in Figma. Look at what we have today, decide what it should be, and build it.

Ref: TRAO-DA-01

Role	Product Designer — UI/UX, Figma-native
The task	Redesign and rebuild the trao.ai landing page for an enterprise audience
Deliverable	One Figma file, plus a two to three minute walkthrough video
Time to submit	Five days from the day this brief reaches you
Effort we expect	Twelve to twenty hours. Please keep it inside that.
Decision	If we like your taste, an offer within three days of submitting
How to submit	Through the submission link in your invitation email
Questions	talent@trao.ai

1 What Trao Is

Trao is an embedded software and AI R&D lab. Organisations bring us a process that is slow, manual or broken — a qualification workflow, a sales pipeline, a design-to-production handoff — and we put engineers and designers inside their team to research it, redesign it and rebuild it as a production system. Working software, live, holding up at 3am on a Tuesday.

We have scaled our own products to millions of users, automated an entire outbound pipeline for a family office, and cut a textile design-to-production cycle from weeks to under an hour. We work across EdTech, financial

services, manufacturing and consulting, because the hard part — AI systems that survive contact with production — transfers between them.

The people who buy from us are CTOs, COOs, heads of transformation and operating partners at companies doing five million to several billion in revenue. They arrive with one question: can this team be trusted with something that matters.

2 The Brief

Go to trao.ai and read it the way a prospective client would. Then rebuild it.

The page has exactly one job: take an enterprise buyer who has never heard of us and get them to book a call. Everything on it either moves that forward or is in the way. We are handing you the business and the audience; the answer is yours to find. Section architecture is part of the assignment, and so are the visual direction, the copy, the hierarchy and the decision about what to cut.

THE THREE QUESTIONS WE ARE ASKING

What should this page say, and in what order? Which sections earn their place, which ones are missing from the current site, and which ones are there today for no good reason.

What should it look like? Choose a design language you admire and let it inform yours, then tell us what you chose and why. We would rather see a strong point of view executed properly than a safe page that offends nobody.

Can you build it well? A Figma file is a working document. We will open yours and look inside it.

3 What Enterprise Means Here

The person you are designing for is cautious by profession. They have been pitched AI by nine vendors this quarter and six were selling the same slide. They scan for reasons to disqualify you, and give the page thirty to ninety seconds before they book or close the tab. They are rarely the only decision-maker either: whatever they see, they will have to justify to procurement or a board.

What earns trust with that person

Specificity. Named clients, real numbers, actual systems we built and what they replaced. A concrete claim invites scrutiny, which is exactly why it converts.

Evidence of production work. The difference between a lab that demos and a lab that deploys is the whole proposition. Show it rather than assert it.

Restraint. Confidence reads as quiet. The most credible enterprise pages in the world are also the least decorated.

An obvious next step. One primary action, repeated at the right moments, always the same action.

What loses them

- Adjectives doing the work that proof should be doing — cutting-edge, transformative, end-to-end, next-generation.
- Decoration with no argument behind it: floating glass cards, gradient meshes, generic 3D blobs, stock photography of people at a whiteboard.
- A wall of undifferentiated feature tiles that could belong to any of the nine vendors, or four competing calls to action above the fold.

The visual territory we admire is Anthropic, Stripe, Mistral, Linear and Sierra — considered, typographically serious, every element carrying weight. Treat that as a signal about our taste rather than a brief. If you can show us something better, do that instead; we will take the argument seriously.

4 Scope and Deliverables

4.1 Required

Desktop page, full length. 1440px frame. Every section, top to bottom, including the footer.

Mobile page, full length. 390px frame. Roughly a third of your readers are on a phone, and we will look at how your decisions survive the narrower column.

One moment of motion or interaction. Whatever the page deserves — a hover state, a scroll behaviour, a transition. A prototype, a screen recording or a sequence of frames all work.

A short rationale, on the canvas. One page maximum, laid out inside the Figma file beside the work: the design language you drew from, what you changed about the section order and why, and the one decision you expect us to push back on.

A walkthrough video, two to three minutes. Screen-record yourself moving through the file with your voice over it. Why this section order, why this typeface, what you threw away, where you got stuck. Treat this as seriously as the design itself: it is how we read the thinking behind the page, and it tells us more in three minutes than a static frame tells us in thirty.

4.2 The Figma craft we will look at

We will open the file and move around in it. Auto layout that holds when frames resize. Components with sensible variants rather than forty detached copies. Colour and type defined as styles or variables. Layers and frames named well enough that a second designer could pick the file up on Monday.

Write real copy — every headline, subhead, button and caption. On a landing page the words are half the design.

4.3 Leave these out

Dark mode, a full design system or component library, developer handoff specs, and code. Spend those hours on the page instead.

5 Freedom and Constraints

	CONSTRAINT
1	It has to be recognisably Trao — our name, our logo, our business. Reinterpret the brand as far as you like; keep the page selling what we actually sell.
2	It has to be a landing page whose single job is booking a call.
3	It has to be your own work. Use whatever tools you like, including AI.
4	It has to arrive as one Figma file.

Beyond those four, everything is yours: palette, typeface, grid, section order, the tone of the copy, illustration or photography, how much motion, how long

the page runs. Keep as much or as little of the current trao.ai as you like — headline, metrics row, logo wall, section order, all of it is open. If you think the page works against us, say so in your rationale and show us what it should have been. We asked because we want the outside view.

6 How We Will Judge It

CRITERION	WHAT THAT MEANS IN PRACTICE	WEIGHT
Design taste	Type, spacing, colour, hierarchy, restraint. Whether the page was made by someone with a point of view, and whether the small decisions are as considered as the big ones.	40%
Conversion thinking	Whether the section architecture makes an argument that builds, objections are handled in the right order, and the call to action lands where a buyer is ready for it.	25%
Figma craft	Structure, auto layout, components, styles, naming. Whether an engineer or another designer could work from this file tomorrow.	20%
Copy and clarity	Whether a stranger understands what Trao does within fifteen seconds, and whether the words sound like a business rather than a brochure.	15%

Taste carries the most weight because it is the hardest thing to teach. Figma craft we can sharpen in a month; conversion instinct comes with reps. Knowing which of two pages is better either shows up in the work or it stays absent, which is why we run an assignment rather than a marking scheme. A page that is unusual and slightly rough beats one that is tidy and anonymous — take the swing.

7 Submitting

Your invitation email contains a submission link. Everything goes through it.

The Figma link. Set sharing so that anyone with the link can view, then open it in an incognito window to confirm it works. More assignments are lost to sharing permissions than to bad design.

The walkthrough video. A link is fine — Loom, Drive, YouTube unlisted, whatever is easiest. Please make it viewable by anyone with the link as well.

One short paragraph. The design language you drew from and why it suits an enterprise buyer, plus roughly how many hours you spent. We ask to calibrate, and the number carries no penalty.

Five days from the day this brief reaches you. If you need a few more, email talent@trao.ai and ask. We would much rather see finished work late.

8 What Happens After You Send It

We review every submission ourselves. If we like your taste, you will have an offer within three days of submitting — an offer, rather than a fourth interview or a second assignment.

If it misses, we will still tell you where. And to state it plainly: the work stays yours — we will put your design on trao.ai only if we hire you or pay you for it, so add it to your portfolio the day after you send it.

9 On Using AI

Use it. We build AI systems for a living, so grading you on tool purity would be strange. Generate concepts, draft copy, produce imagery. Two conditions: tell us where you used it, in one line in your rationale, and know its limit. The model has no taste and no opinion about our business, and hands everyone the same forgettable page. Deciding what to keep, what to throw away and what to make instead is the assignment.

ONE LAST THING

Somewhere in this page, show us your creative side. An idea about how to explain what we do, a piece of motion, a way of handling type, a section nobody else would think to include. Loud is optional; yours is the point.

We are looking for someone who sees what we have missed, and builds it well enough that we wonder how we ever shipped the old page. Good luck — we look forward to opening your file.
